

pyeon – Product Requirements Document (Series A Level)

Version: 2.0

Product Owner: Sun Yu

Target Launch: Q2 2026

Platform: iOS + Android (React Native)

1. Executive Summary

pyeon is a mobile-first crisis-support app designed for moments of acute anxiety and panic attacks. Unlike traditional wellness apps that assume calm cognition, pyeon delivers a zero-choice, single-path intervention optimized for high cognitive load states.

Core Thesis: Reducing decision-making during panic increases likelihood of emotional regulation.

MVP Goal: Deliver fastest path from app open to user stabilization in under 3 minutes, fully offline.

2. Target User & Persona

Primary Persona:

- Age: 18–30
- Experiences intermittent panic attacks
- Reaches for phone during distress
- Struggles with decision-making during episodes
- Comfortable with smartphones

3. Problem Definition

- High cognitive load during panic
- Existing apps require navigation
- Text-heavy instructions increase overwhelm
- Choice paralysis worsens distress

4. Product Vision

Build the fastest path from High Alert to Regulated State through a linear, visual-first flow.

5. Core Product Hypotheses

- Removing choice reduces abandonment
- Large CTA reduces cognitive paralysis
- Linear progression improves completion rate
- Color transition reinforces calming perception
- 3-minute intervention reduces escalation need

6. Core User Flow (MVP)

- Main Screen: Large 'Help Me' button
- Breathing: 4-7-8 guided animation (3 cycles minimum)
- Grounding: 5-4-3-2-1 tap interaction
- Check-in: 'I feel better' or 'I need more help'
- Escalation: Safety contact or 988 hotline

7. Success Metrics

- Time to first action < 3 seconds
- Session completion rate > 60%
- Self-reported calming rate > 70%
- Session start rate > 75%
- Onboarding completion > 80%

8. Non-Functional Requirements

- App cold start < 2 seconds
- Zero crashes during breathing animation
- Offline functionality guaranteed
- Resume session if app restarts
- WCAG AA accessibility compliance

9. Risk & Mitigation

- Suicidal crisis → Clear escalation + hotline
- App crash → Session persistence
- Over-dependence → Encourage real-world contact
- Color overstimulation → Validate via testing

10. Out of Scope (MVP)

- User accounts
- Cloud sync
- Session history UI
- Notifications
- Audio guidance
- Monetization
